

VECTA ENERGY CORPORATION ANNOUNCES YEAR END RESULTS AND STATEMENT OF RESERVES DATA

Calgary, April 30, 2010 Vecta Energy Corporation (“Vecta”) (VER – TSXV) announced today that cash flow from operations in 2009 was a negative amount of \$288,241 a significant decline from the positive amount of \$428,329 recorded in 2008. A decline of 49% in the average price of natural gas received by the Company was primarily responsible for the change, along with one-time consulting and administrative costs incurred for the completion of the merger of Kroes and Vecta. Proved and probable reserves declined from 178.9 Mboe in 2008 to 106.9 Mboe in 2009 due primarily to production during the year and the reversal of proved undeveloped reserves previously attributed to the Brewster 8-22 well. Production averaged 99 boe per day compared with 107 boe per day produced in 2008. No production was added from drilling in 2009.

Capital expenditures for the year totaled \$81,641 compared with \$2,176,916 spent in 2008 as the low natural gas price impacted cash flow and the Company’s ability to participate in drilling.

Oil and Gas Reserves

The Company’s share of oil and gas reserves was evaluated by Paddock Lindstrom and Associates Ltd. at December 31, 2009 and the details of this evaluation are provided in the Company’s NI 51-101 Statement of Oil and Gas Reserves.

Oil and Gas Drilling and Completion Activity

In the Brewster area the Company participated in a farm-out of suspended well 8-22 whereby the farmee paid for the completion and testing of the well and, if productive, connect it to sales lines, in order to earn a portion of the Company’s working interest. Unfortunately, the well did not produce hydrocarbons on test and was abandoned. The same farmee had the option to drill and complete two more wells on acreage where the Company has interests and the 1-26 well was drilled in November of 2009 and now stands awaiting testing and connection. The Company’s interest in this section was 7.5% but by virtue of the farmout, it’s interest drops to 3%. The farmee has not decided whether or not to drill the second option well.

The Company sold its 50% interest in a section of land at Gilby for \$128,000 and it retains a 2.5% overriding royalty on any future production. In addition, it received \$48,000 for its interest in 5 sections of land in its shallow gas play where one well produced minor amounts of natural gas.

Vecta has filed its 2009 Financial Statements, MD&A, CEO and CFO Certificates and NI 51-101 (F1, F2, F3) with the securities regulatory authorities in Canada. These filings are available for review at www.sedar.com.

BOE’s may be misleading, particularly if used in isolation. A BOE conversion ratio of 6MCF:1Bbl is based on an energy equivalency conversion method primarily applicable at the

burner tip and does not represent a value equivalency at the wellhead.

FORWARD-LOOKING STATEMENTS

This disclosure contains certain forward-looking estimates that involve substantial known and unknown risks and uncertainties, certain of which are beyond Vecta' control, including: the impact of general economic conditions in the areas in which the Company operates, industry conditions, changes in laws and regulations including the adoption of new environmental laws and regulations and changes in how they are interpreted and enforced, increased competition, the lack of availability of qualified personnel or management, fluctuations in commodity prices, foreign exchange or interest rates, stock market volatility and obtaining required approvals of regulatory authorities. In addition, there are risks and uncertainties associated with oil and gas operations; therefore, Vecta' actual results, performance or achievement could differ materially from those expressed in, or implied by, these forward-looking estimates and, accordingly, no assurances can be given that any of the events anticipated by the forward-looking estimates will transpire or occur, or if any of them do so, what benefits, including the amounts of proceeds, that may accrue to Vecta.
