

VECTA ENERGY CORPORATION ANNOUNCES FIRST QUARTER RESULTS

Calgary, May 31, 2010 Vecta Energy Corporation (“Vecta”) (VER – TSXV) announced today that cash flow for the first quarter of 2010 was a negative amount of \$49,815 compared to a negative amount of \$62,209 for the first quarter of 2009. Production for the first 3 months averaged 86 barrels of oil equivalent per day compared with 123 boe/d in the first quarter a year ago. The lower production is due to natural decline as well as the sale of a producing well late in 2009. The average price of the Company’s natural gas production was \$5.09 per thousand cubic feet, essentially unchanged from the first quarter a year ago. Operating costs were \$2.01 per thousand cubic feet equivalent, down from \$2.40 a year earlier. Administrative costs dropped by 22% due to cost cutting measures introduced by the Company.

With the price of natural gas remaining under pressure, the Company plans no capital spending for the remainder of the year. Vecta continues to review new plays where it can farm out some of its interests in the attractive Brewster region of west central Alberta, earn interest with its proprietary technology; as well as looking at merger and acquisition opportunities, particularly in conjunction with Vecta Resources LLC in the United States, its single largest shareholder. Commodity prices, especially natural gas, are of concern as lower gas prices are being seen as a detriment to access to new capital. Therefore prospect/acquisition areas Vecta is reviewing, while primarily gas, have a significant component of liquids and are economical under even the most conservative gas price predictions. While there is no assurance that Vecta will be successful in any merger or acquisition activity, management is optimistic about the future assuming one or more of these efforts bear fruit.

BOE's may be misleading, particularly if used in isolation. A BOE conversion ratio of 6MCF:1Bbl is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead.

FORWARD-LOOKING STATEMENTS

This disclosure contains certain forward-looking estimates that involve substantial known and unknown risks and uncertainties, certain of which are beyond Vecta' control, including: the impact of general economic conditions in the areas in which the Company operates, industry conditions, changes in laws and regulations including the adoption of new environmental laws and regulations and changes in how they are interpreted and enforced, increased competition, the lack of availability of qualified personnel or management, fluctuations in commodity prices, foreign exchange or interest rates, stock market volatility and obtaining required approvals of regulatory authorities. In addition, there are risks and uncertainties associated with oil and gas operations; therefore, Vecta' actual results, performance or achievement could differ materially from those expressed in, or

implied by, these forward-looking estimates and, accordingly, no assurances can be given that any of the events anticipated by the forward-looking estimates will transpire or occur, or if any of them do so, what benefits, including the amounts of proceeds, that may accrue to Vecta.
